Alan Turing - Wikipedia

A Turing machine is a mathematical model of computation that defines an abstract machine, which manipulates symbols on a strip of tape according to a table of rules. Despite the model's simplicity, given any computer algorithm, a Turing machine capable of simulating that algorithm's logic can be constructed.. The machine operates on an infinite memory tape divided into discrete cells.

A personal computer As described on another Scrapbook page, Manchester University had the world's first working computer in 1948. In February 1951 a fully engineered version, the Ferranti Mark 1, came into operation. The result was that Alan Turing was in the one place in the world where he could enjoy the personal use of a computer to work on his new theory of life.
