4) Scanning System: Images are formed by rastering the electron beam across the specimen using deflection coils inside the objective lens. The stigmator or astigmatism corrector is located in the objective lens and uses a magnetic field in order to reduce aberrations of the electron beam.

Introduction to Scanning Electron Microscopy

FEI Company is a world leader in transmission and scanning electron and ion microscopy. Our commitment to microscopy dates back to the mid-1930s, when we collaborated in research programs with universities in the U.K. and The Netherlands. In 1949, the company introduced its first commercial product, the EM100 transmission electron microscope.
