

jets from young stars pdf

Request PDF on ResearchGate | Jets from Young Stars | Most stars produce spectacular jets during their formation. There are thousands of young stars within 500pc of the Sun and many power jets.

Description : This volume presents the edited lecture notes of the First JETSET School on Jets from Young Stars: Models and Constraints, held by the Marie Curie Research and Training Network on JET Simulations, Experiments and Theory. The first half of the book is devoted to general observational constraints.

If we are to understand the origins of emission line jets from young stars we have to probe their immediate circumstellar environments on scales of 10 AU or less.

The jet phenomenon lasts at least a million years for young, solar-like, stars and it occurs during a wide

variety of young stellar object (YSO) phases. This includes the period when the source is highly embedded (Class 0) to when it becomes optically visible for the first time as a classical T Tauri star (Class II).

In this article what is currently known about jets from young stars is summarised, including an outline of why it is important to study jets. The second part of this article is dedicated to jets from young brown dwarfs. While only a small number of brown dwarf outflows have been investigated to date, interesting properties have been observed.

Studying the complex physical systems of stellar jets necessitates the incorporation of nonlinear effects which occur on a wide variety of length and timescales. One of the primary methods used to study the physics of jets is numerical simulations that apply high performance computing techniques.
